

## More Examples

- Assume again that we add a bucket whenever the # of items exceeds  $2n$ .
- What will the table below look like after inserting the following sequence of keys? (assume no overflow buckets are needed)

"`toString`":  $h("toString") = 8 = 00001\text{000}$   
"`private`":  $h("private") = 7 = 00000\text{111}$   
"`interface`":  $h("interface") = 9 = 00001\text{001}$

n = 5, i = 3		n = 6, i = 3	
000 = 0	" <code>continue</code> ", " <code>toString</code> "	000 = 0	" <code>continue</code> ", " <code>toString</code> "
001 = 1	" <code>class</code> ", " <code>while</code> "	001 = 1	<b>"<code>interface</code>"</b>
010 = 2	" <code>if</code> ", " <code>switch</code> ", " <code>String</code> "	010 = 2	" <code>if</code> ", " <code>switch</code> ", " <code>String</code> "
011 = 3	" <code>for</code> ", " <code>extends</code> ", " <code>private</code> "	011 = 3	" <code>for</code> ", " <code>extends</code> ", " <code>private</code> "
100 = 4	" <code>case</code> "	100 = 4	" <code>case</code> "
		101 = 5	<b>"<code>class</code>", "<code>while</code>"</b>
